785 Huez

Every Climb, Every Time

**The 785 Huez embodies
our vision of a road bike
for climbers.**

Every climb, every time

The new 785 Huez reflects our vision of a performance climbing bike. Designed for demanding cyclists who measure themselves against the greatest ascents. Light and responsive it will take on the steepest slopes with ease. The 785 Huez is the choice companion for when the road goes up, providing comfort and efficiency on long climbs and mountain challenges, as well as performance in daily training meaning you'll be ready to reach the summit.

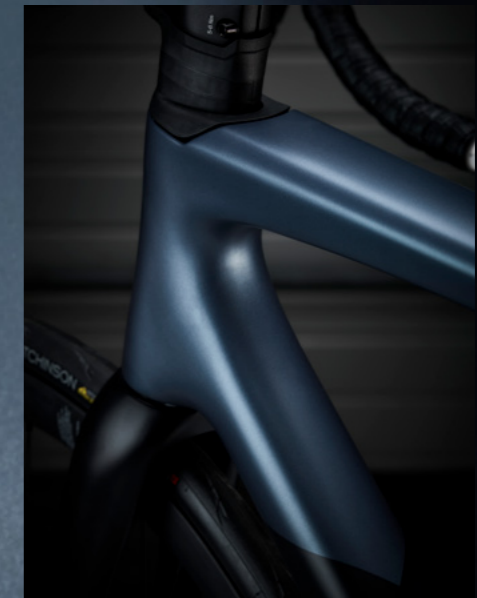

The Foundations of performance

The light and responsive carbon frame of the new 785 Huez maximizes your explosive accelerations when the gradient increases. Using high-modulus fibers and minimalist Nano tubes, the construction of the frame offers optimized power transfer alongside flexibility to enable intense and prolonged efforts in the mountains.

Beautiful simplicity

The technology you need: no more, no less. The new 785 Huez stands out thanks to a timeless design, with its finesse and curves and simple but effective technical choices. The integration of cables, axles, bottom bracket and seat post are designed to combine performance, simplicity of maintenance, and durability, without compromising the refined lines of the bike.

A high-angle, wide shot of a winding asphalt road on a steep, rocky mountain slope. The road curves from the bottom left towards the top right. Two cyclists in dark clothing are riding up the road, positioned in the middle-right section. The road has white dashed and solid lines. A wooden post-and-rail guardrail runs along the right side of the road. The background is a hazy, mountainous landscape. The overall tone is muted and atmospheric.

Best choice for climbing

The geometry of the new 785 Huez makes it the ideal choice for climbers, designed for explosive accelerations on steep slopes, as well as for long and repeated efforts. Compact and with precise handling, it provides similar sensations to riding a race bike, but its position is also designed to offer the indispensable comfort required for long days in the high mountains.

Ready for any challenge

Whether it's summer in the mountains or winter training, the weather and road surface can quickly deteriorate. So that it's ready to accompany you on all of your outings, in all conditions, the new 785 Huez accepts tires up to 32mm, offering more versatility and maintaining impeccable road handling at all times.

Optimal power transfer
during accelerations

Position designed for
long ascents

A geometry made for climbing

Thanks to a specific geometry, the new 785 Huez is compact and handles precisely. The reach and stack have been optimized to offer you the best position when riding in the mountains. This guarantees performance, efficiency and comfort whether you climb standing or seated, for 1 minute or 1 hour.

Cockpit integration

The cables and brake hoses are perfectly integrated into the handlebar and stem of the new 785 Huez, offering a sleek design and reducing aerodynamic impact. Not only simple to install and maintain, the integrated cockpit is ergonomically optimized.

The internal routing of the cables and brake hoses also offers superior reliability and durability. The frame design is simplified, the cables and hoses benefit from increased protection, and the headset offers a better seal as well as smoother operation.

A simple and durable build

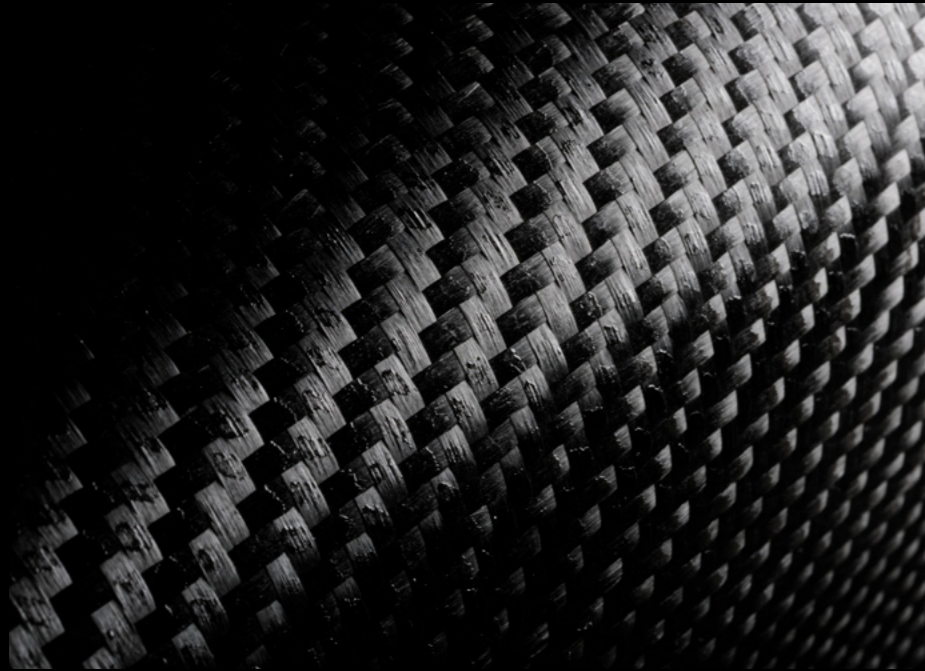

T47 bottom bracket, Ø 27.2mm seat post, and through-axle wheels are chosen to guarantee simplicity of assembly, disassembly, and maintenance without compromising on performance. The frame is guaranteed for life upon registration of the product.

Large tire clearance

The new 785 Huez accepts a tire section of up to 32mm, adapting to the latest technical evolutions and allowing for more versatile setups, notably tubeless wheels. This means that you can maintain optimal efficiency while increasing comfort and road handling.

Carbon core

The Nano tubes, thin and rounded, combined with high-modulus carbon fibers are the result of LOOK Cycle's unique expertise in carbon composites. Simple but effective choices aimed at achieving an unbeatable stiffness-to-weight ratio.

The new 785 Huez has a carbon composition specific to each frame size. It is designed to stiffen areas that are subjected to significant power transfer and to give flexibility to certain tube sections which increases comfort and road handling. To save weight, we have used specially developed Nano tubes reducing the thickness of carbon while maintaining the frame's performance and solidity.

A tribute to climbers

Since the beginning, LOOK Cycle has brought French excellence and its unique know-how to mountain lovers. The new 785 Huez is no exception, embodying our vision of a performance bike for climbers.

785 Huez

Our vision of performance:

- + A responsive, agile, and precise road bike designed for demanding cyclists.

Designed for climbers:

- + High-Modulus carbon lightweight frame and optimized geometry for a perfect position when the road ascends.

Simple and beautiful:

- + A timeless design that conceals efficient integration along with reliable and durable construction.

Ready to tackle the mountains:

- + Wide tire clearance (32mm) and optimal handling when conditions deteriorate.
